Help card

Add Workflow Configure Workflow Duplicate Workflow

Organizations face various kinds of changes which differ in process and control. Changes such as, replacing switches or routers across the organization requires a systematic flow with upgrading the RAM for users or changing the printer toner, do not have to undergo the entire change lifecycle process. Such changes can be implemented directly and closed, and at times they can be implemented through a change workflow.

The **Change Workflow Wizard** lets you simplify the change lifecycle by configuring change workflows that suits your organizations needs. The configured workflows are listed in the Workflow List defined in the selected workflow.

Add Change Workflow

You can configure a new change workflow by clicking **Add Change Workflow** button.

1. Provide a name for the Change Workflow in the **Name** field.
2. Select the **Emergency** check box if the workflow defines instant processes.
